

Honoring Our Heritage and Forging Forward into the Future: Curricular Change and Social Accountability at VTCSOM

TEACH Health Professions Educator Series
June 24, 2024

Jed D. Gonzalo MD MSc
Senior Associate Dean for Medical Education
Professor, Internal Medicine and HSIS

Objectives

As a result of this session, participants will be able to:

1. Explain the social accountability framework for academic medicine.
2. Illustrate several different pedagogical approaches to pre-clerkship curriculum used in both the US and Canada (inclusive of the patient case presentation model).
3. Describe the approach to curricular change and evolution at VTCSOM.
4. (Briefly) highlight the future work in Phase 2-3 of the curriculum.

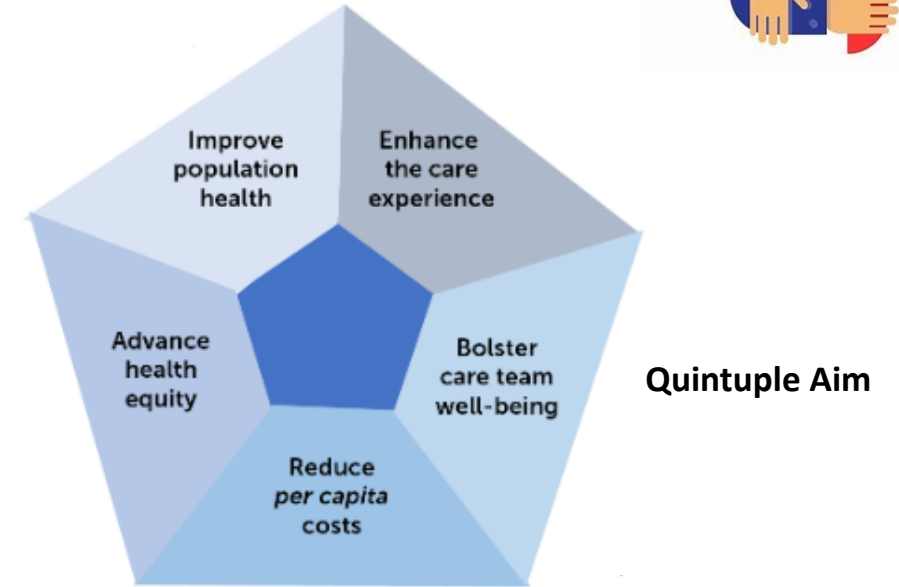

Education Frameworks/Concepts Used in Presentation

1. Strategic Planning and Change Management Approaches – John H. Dobbs, John F. Dobbs
2. Change Management Model (“study, envision, design, build, implement”) – Kurt Lewin et. al.
3. “Education Scans” – generalized conceptual model, related to curriculum development (Jay McTighe, David Kern)
4. Education Science Principles – numerous (Hattie, Bloom, Schwartzstein, et al.)
5. Guiding/Operating Principles – Ron Harden, Michael Fullan
6. Key Driver Diagrams – several, Institute for Healthcare Improvement
7. Patient Care Presentation Model in Medical Education – U. of Calgary, Dr. Rachel Ellaway

Social Accountability of Medical Schools

1. Workforce shortages (Virginia, USA, world)
2. Medical student “recruitment” and debt
 - Impacts specialty choice
 - Impacts URiM within specialties
 - Impacts location of practice
3. Graduates’ skills for current and future practice (beyond medical knowledge)
4. Medical education’s need to recognize the time lag from training to practice
 - Today’s matriculant to medical school will be practicing ~July 2031
5. Patient health outcomes

| | Responsibility | Responsiveness | Accountability |
|--------------------------|-----------------------|-------------------------------------|-----------------------------|
| Social Needs Identified | Implicitly | Explicitly | Anticipatively |
| Institutional objectives | Defined by faculty | Inspired from data | Defined with society |
| Quality of graduates | Good practitioners | Meeting criteria of professionalism | Health system change agents |
| Focus of evaluation | Process | Outcome | Impact |
| Assessors | Internal | External | Health partners |

Background and Rationale

- VTCSOM began as a medical school in 2008 – and we have had tremendous success.
- Since that time, our curricular approach has remained consistent.
- Medical schools typically undergo curricular revisions every 6-8 years to adapt to:
 1. Evolving needs in society, and,
 2. Educational science.
- The Liaison Committee for Medical Education (LCME) has ↑ requirements
 - ~50% of policies/requirements are new for our 2026 review (vs 2018 review)
- The primary needs for change were to:
 - Improve alignment with LCME requirements
 - Enhance focus on patients and clinical applicability
 - Prepare learners for subsequent phases in their training (clerkships, internships, etc.)
 - Evolve the focus towards competency-based medical education (and precision education)

Our Strategic Planning Approach

2022-current day

Our Strategic Planning Approach

>300 individuals
contributed to the process

- AAMC Year 2 Questionnaire
- Graduation Questionnaire
- Course, phase, curriculum evals
- Graduate Profiles for Specialties
- Work Hours Report
- Competency/Outcomes Report
- (assessment of what is not present)

Our Collaborative Processes

2022-current day

Timeline and Deliverables

VTCSOM Strategic Planning

Medical Education Mission

Primary Goals of Strategic Planning Process

- Goal 1: January 2023, curricular schedule change approved by BIC1-2, MCC.
- Goal 2: August 2023, curricular revisions approved by BIC1-2, MCC.
- Goal 3: September 2023, core components of curricular revisions finalized.
- Goal 4: July 2024, curricular revisions launched.

Task Forces
Committees

- Design Task Force 1 – Core Strategy
- Design Task Force 2 – Holistic Assessments
- Design Task Force 3 – Phase 1 Restructure
- Design Task Force 4 – Phase 2 and the new “Phase 3”
- Design Task Force 5 – Faculty Identity and Support
- Design Task Force 6 – Professional Identity Formation

- Objectives Revision Task Force
- PBL Revision Task Force

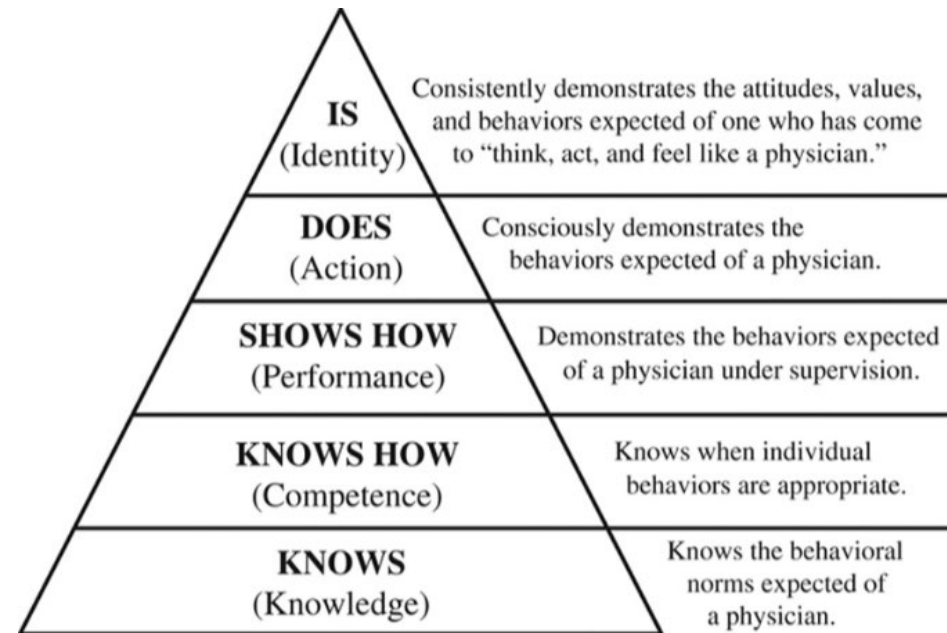

We are here!

Operationalizing Curricular Revisions

Operationalizing Curricular Revisions

Our Primary Goals

VTCSOM's Professional Identities

Physician who possesses skills and qualities related to learning, adaptability, ability to thrive in changing environments, and ongoing personal and professional development.

Physician leader who uses a systems thinking mindset in his/her professional role to develop/use the knowledge and skills necessary to contribute to the holistic needs of patients, populations of patients, and health systems to achieve the best outcomes.

Physician who has the ability to integrate clinical medicine and scientific inquiry and research, bridging the gap between bench sciences and direct patient care.

Guiding Principles

VTCSOM Guiding Principles (aligned with educational science principles)

The Phase 1 Curriculum will be based on the following Guiding Principles:

1. Curriculum will promote skills required for the professional identities (inquiry, e-intelligence, growth mindset, systems thinking).
2. Foundation of curricular weeks will be patient presentations.
3. Curricular integration will occur horizontally (across domains/disciplines) and vertically (across time) with all four value domains.
4. Curriculum integration will be interdisciplinary.
5. Curriculum design will spiral concepts across the Phase, ensuring appropriate spaced repetition and long-term retention.
6. Learning needs will drive course design and pedagogy (vs fixed curricular time).
7. Complexity of learning will increase progressively between curricular units to transfer knowledge and prepare for clerkships.
8. Curricular delivery will be grounded in learning methods that promote higher-order reasoning (not just knowledge).
9. Learner advancement will be progressively assessed with formative, low-stakes and high-stakes summative assessments.
10. Curriculum will seek student perspectives about learning approaches and improvement areas.

Phase 1: The Key Changes

The Key Components of the Curricular Changes

Received notification of approval from LCME for proposed changes on March 5, 2024

Goals:

- Enhance alignment of curriculum
- Optimal integration of curricular components
- Early clinical immersion
- Promotion of self-directed, life-long medical learners
- Foster skills & mindset foundational for transition to residency

Changes:

- Reduction of Phase 1 class hours to align with national mean
- Phase 1 concludes in January of MS2 year (v. April)
- Addition of Phase 3 to support career development and transition to residency
- Holistic assessments

Unchanged:

- Focus on community, small group learning, and close faculty-student interactions
- Problem-Based Learning (PBL)
- Dedication to research, inquiry, and longitudinal, mentored research projects
- Four curricular domains
 - Basic science
 - Clinical science
 - Research
 - Health Systems Science and Interprofessionalism

#2: Phase 1 Work Hours

- Trends in US medical education for hours per week
 - Promote independent and self-directed learning
 - ↑ citations for medical schools with higher work-hours per week
 - No “set standard,” but general expectation <22-24 hours per week IN CLASS

Average Weekly Box 1 and 2 Hours by Block

We were in ~95th% for Phase 1 length and weekly hours. The revised curriculum will help us reach learning and accreditation goals.

Goal 22 hours per week.

Note: The average weekly hours calculations per block excluded weekends, holidays, and assessment and special studies weeks.

#3: Clinical Presentation Curriculum Model

- **Discipline-Based Curriculum Model (1870s-)**
 - Knowledge and fact based
 - Biochemistry, anatomy, bacteriology
- **Organ-System-Based Curriculum Model (1950s-)**
 - Originated out of the concern for a disjointed, and fact-based approach in the discipline-based model
 - E.g., pulmonary system (with multiple disciplines included – anatomy, physiology, biochemistry)
 - Struggles with integration in the minds of the learners
- **Problem-Based Curriculum Model (1971-)**
 - Originated out of the need to provide “contextual focal points” for learning and enhance problem-solving skills
 - Active learning within PBL enhances learning/retention and clinical reasoning
 - Struggles with reflexivity to related but dissimilar clinical problems (chest pain – MI vs PE)
 - Struggles with “forward approach” to reasoning – reasoning backward from a single hypothesis (opposite HDR)
- **Clinical Presentation Curriculum Model (1991-)**
 - Originated from the premise that clinical proficiency could be measured in context of clinical problems – how patients present
 - Focus on forward reasoning, knowledge-schema, and problem solving
 - Focus on interdigitation of contextually-based content and clinical behaviors

Our goals:

1. Blend PBL with the clinical presentation model.
2. Use VTCSOM 55 List of Clinical Presentations.
3. Create courses/titles that reflect desired integration → “biological systems.”

Clinical Presentation Model: Engineered to be Patient-Focused

Chest pain

Tremor

Core Concepts to Learn

| |
|--|
| Cerebral and spinal vasculature (anatomy, neuroscience) |
| Regulation of intracranial pressure and neuronal activity (neuroscience) |
| Adverse effects and toxicity of medications (pharmacology) |
| History and communication with patients and families (clinical science) |
| Cranial nerve examinations (clinical science) |

Differential Diagnoses

| |
|----------------------|
| Vertigo |
| Vestibular migraine |
| Inner ear infections |
| Hypoglycemia |
| Motion sickness |
| Dehydration |
| Meniere's disease |

Anxiety

VTCSOM55 – Case Presentations:

Informed by health conditions encountered in Southwest Virginia

VTCSOM55 – Case Presentations

- | | | | |
|--|--|---|--------------------|
| 1. Abdominal pain*^ | 16. Dyspnea*^ | 32. Joint pain^ | 48. Shoulder pain* |
| 2. Abnormal vaginal bleeding^ | 17. Dysuria^ | 33. Leg pain | 49. Sore throat |
| 3. Altered level of consciousness*^ | 18. Ear pain^ | 34. Low back pain^ | 50. Stroke*^ |
| 4. Anxiety^ | 19. Edema*^ | 35. Melena | 51. Syncope*^ |
| 5. Arm and hand pain | 20. Failure to Thrive | 36. Memory loss* | 52. Tinnitus^ |
| 6. Breast complaints*^ | 21. Fatigue^ | 37. Muscle weakness* | 53. Trauma*^ |
| 7. Chest pain*^ | 22. Fever*^ | 38. Nausea/vomiting^ | 54. Tremor*^ |
| 8. Confusion (altered mental status)*^ | 23. Gait abnormalities*^ | 39. Night sweats^ | 55. Weight loss* |
| 9. Cough*^ | 24. Gynecologic symptoms^ | 40. Ocular disturbances*^ | |
| 10. Delirium*^ | 25. Headache*^ | 41. Oral health | |
| 11. Dementia*^ | 26. Hearing loss | 42. Pelvic pain^ | |
| 12. Depressed mood*^ | 27. Hematuria*^ | 43. Rash ^ | |
| 13. Diarrhea*^ | 28. Hematemesis | 44. Red eye | |
| 14. Diet disorders*^ | 29. Hemoptysis*^ | 45. Reproductive dysmorphology, development | |
| 15. Dizziness^ | 30. Inattention, hyperactivity, impulsivity^ | 46. Scrotal pain^ | |
| | 31. Insomnia | 47. Shock | |

*ddx includes Top 15 Cause of Death (SW Virginia), Appalachian Diseases of Despair, and/or in Carilion's 2021 Roanoke Valley Community Health Assessment

^VTCSOM Year 3 Passport

#4: Holistic and Blended Assessment

(Competency-Based Medical Education)

Current Salient Features

- ~60% of course/clerkships = medical knowledge
- Mainly summative approach (and grades)
- In clinical settings, global assessments predominant

Future Salient Features

- Outcomes-based; competency-based
- Blend of formative and summative
- Growth focused, with coaching
- ↑↑ intentionally-developed assessments
- Goal: **balanced assessment program**
 - Coaching program
 - Use of narrative comments
 - Milestones
 - Portfolios
 - Longitudinal dashboards
 - Others

VTCSOM Educational Program Objectives and Subcompetencies

Domain 1: Patient Care

EPO1: Gathering Essential, Accurate Information

SC1: Interview skills

SC2: Physical and mental status examination

EPO2: Clinical and Diagnostic Reasoning

SC3: Differential diagnosis

EPO3: Patient Management Plans

SC4: Diagnostic tests and specialty consultations

Domain 3: Systems-Based Practice

EPO9: Systems Thinking

SC12: Systems thinking

EPO10: Patient Safety and Quality Improvement

SC13: Prevention of patient safety events

SC14: Patient safety

SC15: Disclosure of patient safety events

SC16: Quality improvement

Competency Domain 5: Professionalism

EPO15: Professional Behavior and Ethical Principles

SC29: Professionalism adaptations

SC30: Ethical principles, practice, and solutions

SC31: Responsible conduct of research

EPO16: Accountability/Conscientiousness

SC32: Conscientious behaviors

EPO17: Self-Awareness and Help-seeking

Level 1

Level 2

Level 3

Level 4

Level 5

SC27: Reflective Practice

Incorporates reflective practice and individualized improvement plans as a commitment to personal growth and improve patient care.

Identifies the factors which contribute to gap(s) between expectations and actual performance

Analyzes and reflects on the factors which contribute to gap(s) between expectations and actual performance

Identifies and reflects on the element of personal responsibility for errors.

Analyzes, reflects on, and institutes behavioral change(s) to narrow the gap(s) between expectations and actual performance

Recognizes causes of lapses, such as fatigue, and modifies behavior or seeks help.

Challenges assumptions and considers alternatives in narrowing the gap(s) between expectations and actual performance

Coaches others on reflective practice

Continually re-appraises one's own clinical reasoning to improve patient care

EPO14: Personal Growth and Reflective Practice

SC26: Personal performance data

SC27: Reflective practice

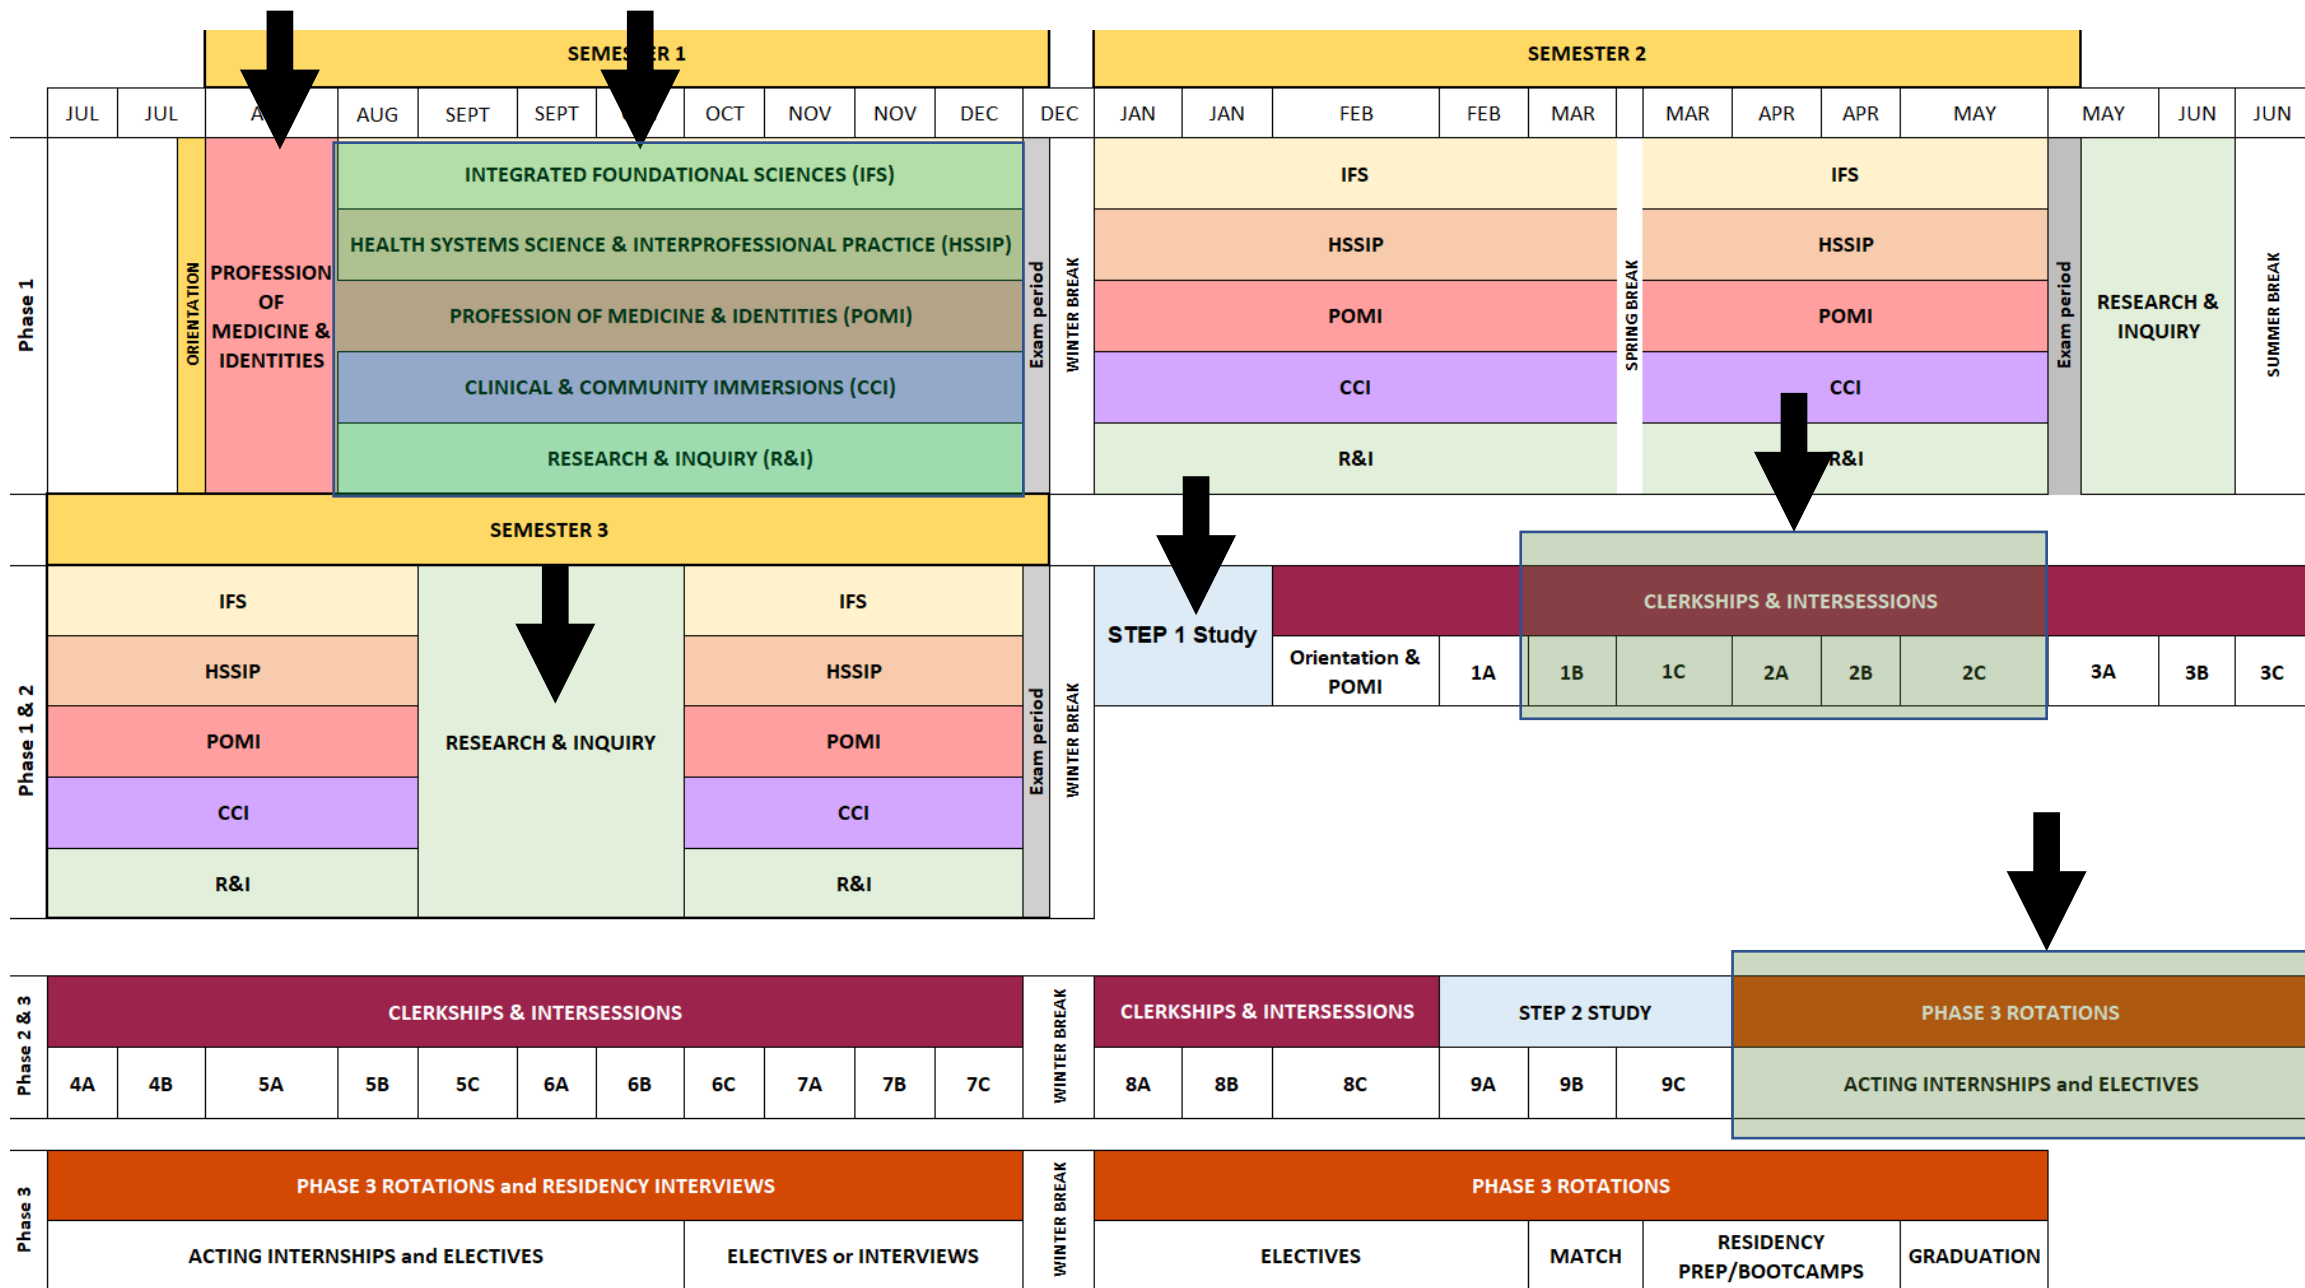

SC28: Personal and professional learning plans

EPO21: Scientific Communication - Pts, Colleagues

SC42: Communication of scientific evidence

Curricular Schematics

Curricular Schematic

UNIT 1 WEEK 1

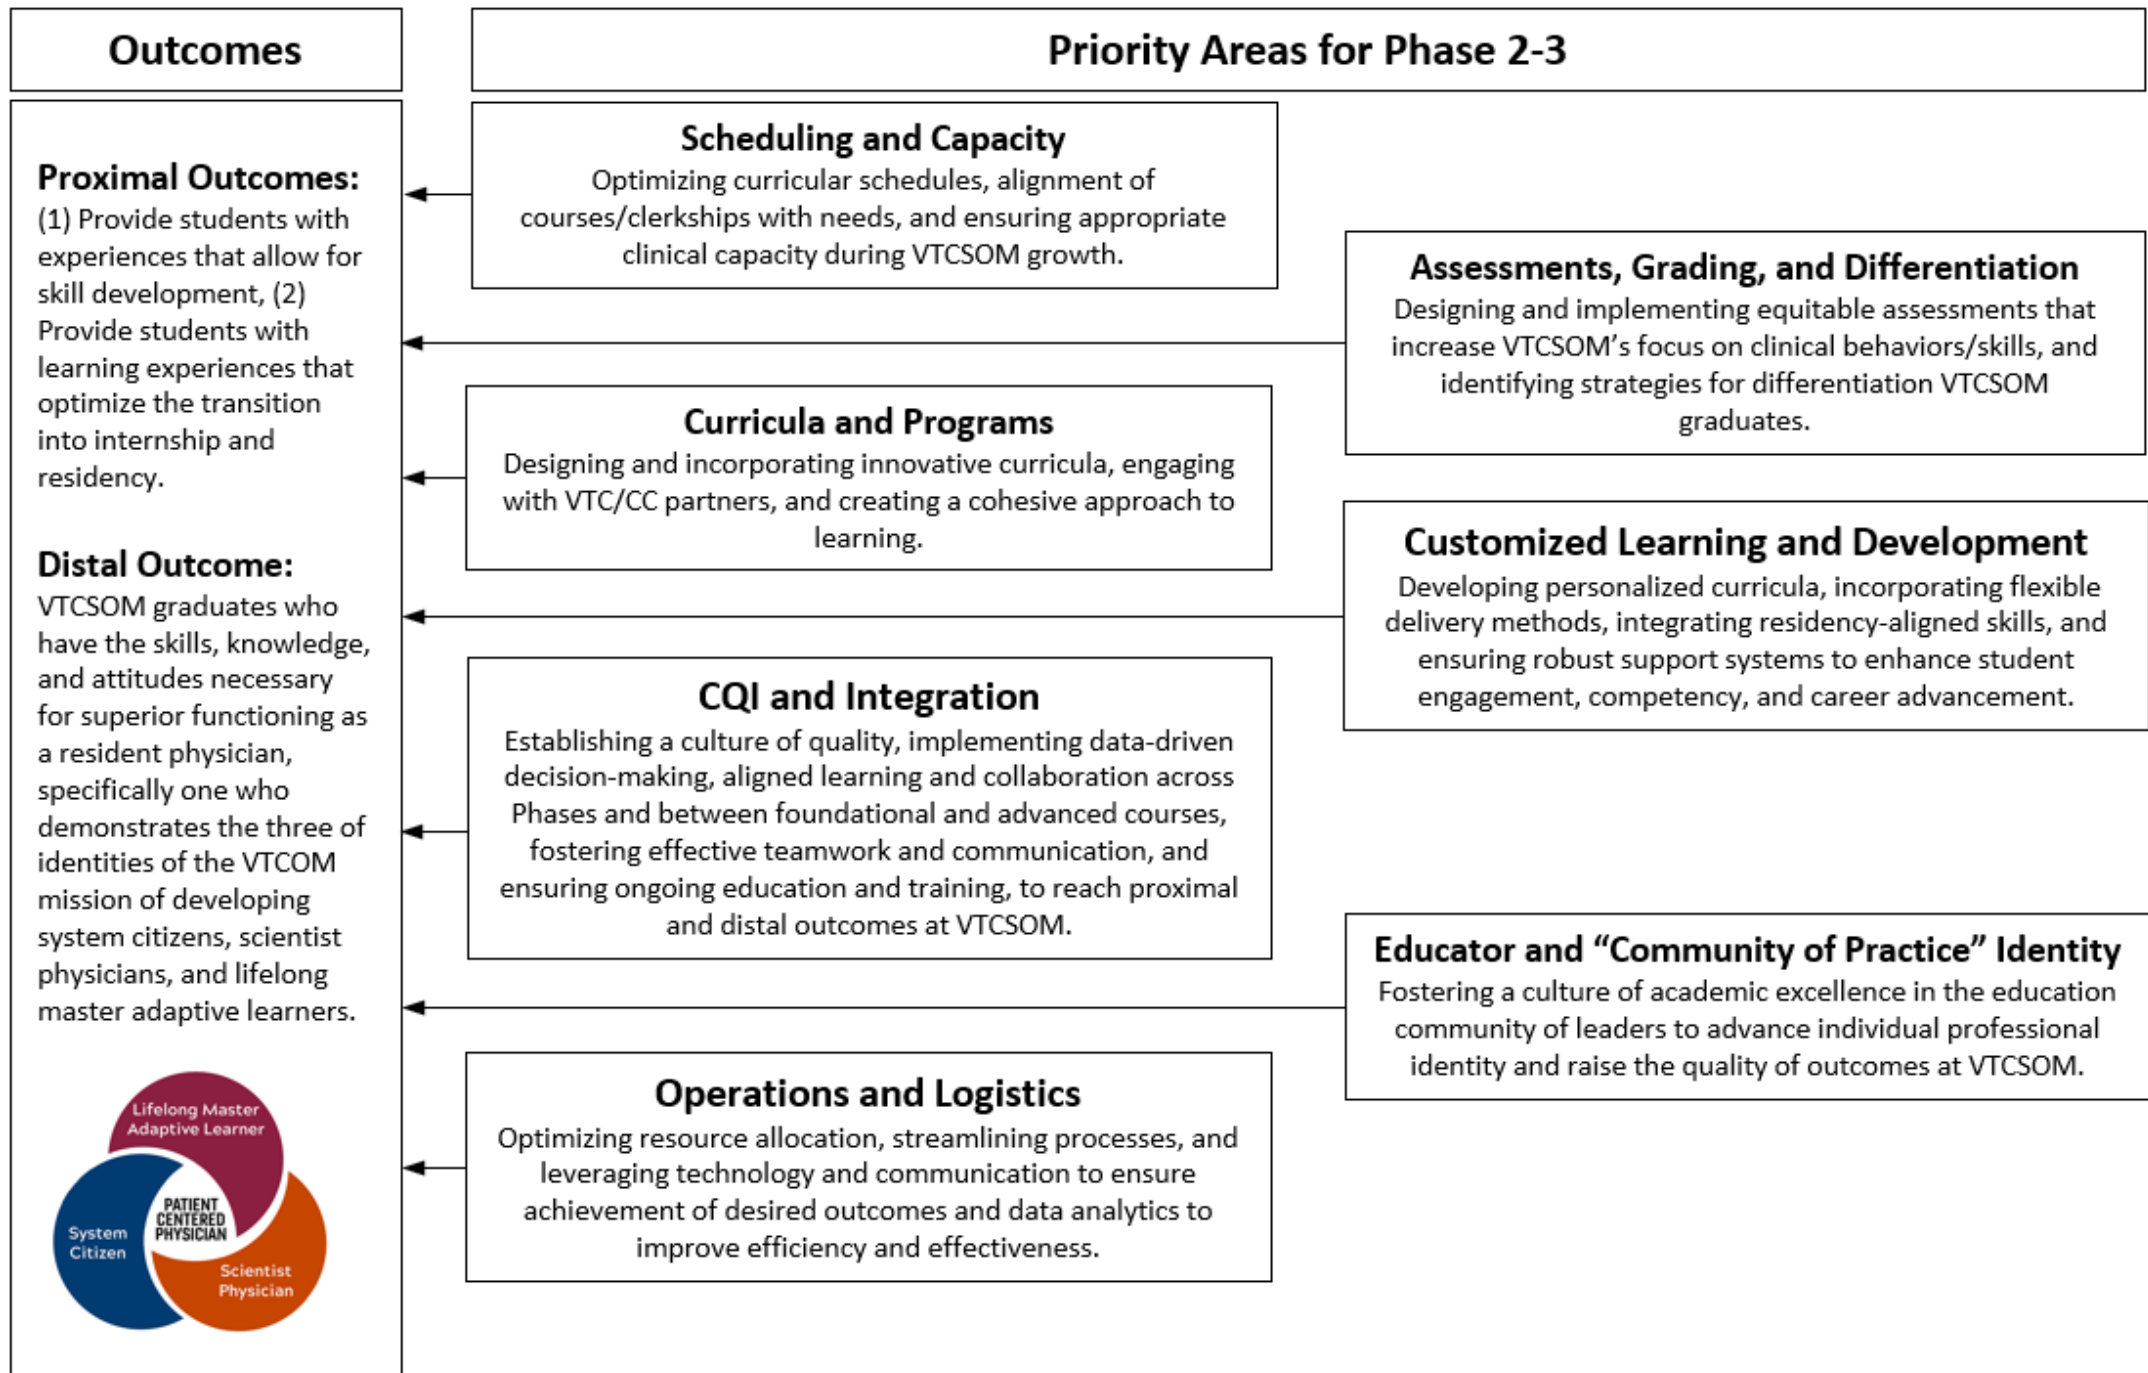

CASE PRESENTATION: Fatigue

| | MON | TUES | WED | THURS | FRI |
|----------|----------------------------------|---|---|---|------------------------|
| 8:00 am | Problem-based Learning | Community & Clinical Immersions option* | Problem-based Learning | Integrated Foundational Sciences | |
| 8:30 am | | | | | |
| 9:00 am | | | | | |
| 9:30 am | | | | | |
| 10:00 am | Integrated Foundational Sciences | Community & Clinical Immersions option* | Research & Inquiry | Health Systems Science & Interprofessional Practice | Problem-based Learning |
| 10:30 am | | | | | |
| 11:00 am | | | | | Weekly Wrap-up |
| 11:30 pm | | | | | |
| 12 pm | | | | | |
| 1:00 pm | | Integrated Foundational Sciences | Community & Clinical Immersions option* | Community & Clinical Immersions option* | |
| 1:30 pm | | | | | |
| 2:00 pm | | | | | |
| 2:30 pm | | | | | |
| 3:00 pm | | | | | |
| 3:30 pm | | | | | |
| 4:00 pm | | | | | |
| 4:30 pm | | | | | |

*No more than one gray block/week. Not every week

Phase 2 and 3

Objectives

As a result of this session, participants will be able to:

1. Explain the social accountability framework for academic medicine.
2. Illustrate several different pedagogical approaches to pre-clerkship curriculum used in both the US and Canada (inclusive of the patient case presentation model).
3. Describe the approach to curricular change and evolution at VTCSOM.
4. (Briefly) highlight the future work in Phase 2-3 of the curriculum.

Education Frameworks/Concepts Used in Presentation

1. Strategic Planning and Change Management Approaches – John H. Dobbs, John F. Dobbs
2. Change Management Model (“study, envision, design, build, implement”) – Kurt Lewin et. al.
3. “Education Scans” – generalized conceptual model, related to curriculum development (Jay McTighe, David Kern)
4. Education Science Principles – numerous (Hattie, Bloom, Schwartzstein, et al.)
5. Guiding/Operating Principles – Ron Harden, Michael Fullan
6. Key Driver Diagrams – several, Institute for Healthcare Improvement
7. Patient Care Presentation Model in Medical Education – U. of Calgary, Dr. Rachel Ellaway

Thank you!
